

Introduction

The described interface is based on a SOAP protocol (Simple Object Access Protocol) and is provided as a Web Service. With this interface XML formatted requests are transferred to the FAX.de server to send fax documents, SMS or iLetter (post letters)

To keep the interface as simple as possible, we reduced the available calls to a minimum. With these few calls you will be able to connect to our service from all kinds of web or office applications very easily.

- 1. SendJob (to send FAX, SMS, eMail, iLetter oder QSign)
- 2. JobStatus (get the progress state and a result report)
- 3. CancelJob (cancel a job)
- 4. RequestReceived (search for and retrieve an incoming fax)
- 5. DeleteReceived (delete an inbound fax from server)

The parameters and result codes of the above calls are described on the following pages.

The detailed call conventions for the XML requests can be found at

https://ccs.fax.de/xmlws.exe?intf=IntfXMLWS

A WSDL document to import by your development software is offered at

https://ccs.fax.de/xmlws.exe?/wsdl/IntfXMLWS

The service is reachable via http and https.

Samples for C# und PHP are available online in our support area at "more downloads"

SendJob

- int SendJob (in string Account,
 - in string **Password**,
 - in int **JobType**,
 - in string Recipient,
 - in base64Binary RecipientFile,
 - in string **SendText**,
 - in string **SendFilename1**,
 - in base64Binary SendFile1,
 - in string SendFilename2,
 - in base64Binary **SendFile2**,
 - in string SendFilename3,
 - in base64Binary **SendFile3**,
 - in dateTime **SendDateTime**,
 - in string **Options**,
 - out int JobId,
 - out int RecipientsCount,
 - out int **PageCount**)

This function initiates the transmission of a document. The document is sent to a single recipient given with the parameter Recipient or – with the job types Fax, SMS, email – to a distribution list given in RecipientFile.

Simple fax notes or SMS messages are given with SendText. More complex fax documents, letters and QSign invoices are given in SendFile1..3. When sending letters the destination address must be located on the first page of SendFile1 document. Refer DIN676 to figure out the required exact address position to become visible in a window envelope.

Note:

- To dispose an email job you need an according activation. Please contact our support team.
- To place jobs with multiple recipients you need an according activation. Please contact our support team.

Parameters SendJob:

Parameters SenuJob:				
Account	Your cus		d	
Password	Your password			
JobType	0=Fax			
	1=SMS			
	2=eMail			
	3=iLette	•	. ,	
	4=iLette			
			ied signed invoices)	
Recipient			gle recipient. A reference id may be appended	
	embedd			
			ts, divided by comma are also possible, but not	
			Use RecipientFile instead.	
RecipientFile			ts in a CSV file format. The file has at least one	
			e and may contain an optional reference id.	
			s CSV, with comma as field delimiter and CrLf or	
	Lf for lin	e break		
	Recipie		Fax-No., Mobil-No., eMail	
		nce-Id	optional, for identification in protocol	
	Line b	reak	CrLf or Lf (Unix/Linux)	
SendText	Fax		ext will be formatted onto a fax form and sent as	
	first page.			
	SMS		nessage body	
	eMail	Mail te	ext	
	iLetter	-		
	QSign	An inc	lividual mail body the signed invoice will be sent	
	with. Refer to the QSIGN documentation for more			
	details.			
SendFilename1/2/3			es and files of type TIF, BMP, HTML, DOC, XLS,	
SendFile1/2/3	PDF. We	need th	ne filename in particular the extension to differ	
	the file's type.			
SendDateTime	Scheduled date and time (UTC) to send the job. A missing value			
	or a time in the past will cause immediately sending.			
			nent tools or libraries do transform local times to UTC	
Options	internal, when creating the XML document. Several send options, see table below			
Options	Several	senu op		
lohid	Dotum		the the id of the new job lies this id to recurst	
JobId			th the id of the new job. Use this id to request	
RecipientsCount			r to cancel a job. hber of valid recipients in Recipients or	
RecipientsCount			iber of valid recipients in Recipients of	
PageCount	Recipien		abor of pages which will be cant to each	
PageCount	Returns the number of pages which will be sent to each			
	recipient. The total page count is the sum of SendText and SendFile13.			
	On SMS jobs PageCount is the number of required messages			
	with 160 chars each.			

Results SendJob:

Parameter Options

With the parameter Options you may set several sending options. Separate options by semicolon ";".

semicolon ";".			
ISDNABS= CALLERID=	Caller Id sig	naled to the recipient	
STATIONID=	Eax stations	id displayed on the recipients fax machine and printed in the fax	
STATIONID-	header line, max. 20 chars alphanumeric.		
		option we use your customer name from your profile instead.	
FAXHEADER=		the fax header line, max. 30 chars alphanumeric.	
FAXILADER=			
	without this	s option we use your fax number from your profile instead.	
FAXRETRY=	Number of r	etries to deliver the fax	
MAILFROM=	Mail sender	address at job type eMail or QSign	
FLASHSMS	Send SMS a		
SMSFROM=	SMS caller i	d, max. 16 chars numeric or 11 chars alphanumeric	
STATURL=		ich is called, when the job is finished.	
		ust contain tokens, which are replaced by real values at call time.	
		ipt on your web server, which updates the results into your	
	database.		
	-	of the URL is limited to 128 chars.	
	\$JID	The job id	
	\$RCV	Recipient number or address	
	\$STAT	Send result (OK, BUSY, NOANSWER, VOICE, NORING,	
		ISDNERR, NOSERVICE, BLACKLIST, SENDFAIL)	
	\$MSGS	Number of pages / messages	
	\$COST	Sending fee in Euro excl. tax	
	\$RID	The recipient's station-ID (Fax only)	
	\$CID	Reference id, given in Recipient or RecipientFile	
	\$DATE	Date of sending (DD.MM.YY)	
	\$TIME	Time of sending (end of transmission) formatted HH:MM:SS (MESZ)	
	\$SEC	Duration in seconds	
	\$RET	Number of retries	
	\$COD	Fax coding (MMR)	
	\$SPD	Fax speed	
	Sample:		
	option: STATURL=www.yourdomain.com/status &JOBID=\$JID &STAT=\$STAT		
	called by FAX.C	ie: www.yourdomain.com/status &JOBID=123456 &STAT=OK	

JobStatus

int JobStatus (in	string Account ,
	in	string Password ,
	in	int JobId ,
	out	string SendResult ,
	out	datetime SendDateTime,
	out	string RemoteId ,
	out	base64Binary StatusFile)

This call performs a state of a running job. The job is referenced by the job id, which the previous call to SendJob returned. In case the job already finished the protocol is returned in StatusFile as a CSV file. Additionally, on single recipient jobs, the send result, send timestamp and the receiving station id (fax only) is returned. On multiple recipient jobs, SendResult will contain the keyword "multi" and SendDateTime the timestamp of the last transmission. On fax jobs, the content of SendResult shows a more detailed error reason. All other job types will show OK, indicating a SMS was delivered to the mobile network, an eMail was sent to the mail server or a letter was transferred to our letter center.

Parameters JobStatus:		
Account	Your customer id	
Password	Your password	
JobId	The job id returned by Send	lJob
SendResult	Send result (OK, Busy,). Only fax jobs do have detailed results. Jobs with multiple recipients will return "multi" here, the result for each recipient is shown in StatusFile.	
	ОК	Fax, SMS, Brief was successful sent
	busy	The recipient's number was repeatedly called, but always busy.
	No answer	The remote station was ringing, but the call wasn't answered
	Voice	The fax negotiation failed. (i.e. human, TAM, bad line, incompatible hardware)
	Call failed	The connection to the dialed number failed. (i.e. destination number too short or wrong, service not supported or number out of order)
	Send-Fail	A fax connection was successfully negotiated, but page transmission failed, (i.e. paper jam, instable line on VoIP users)
	Blacklist	Recipient is blacklisted and will not be called.
	Canceled	The job was canceled
SendDateTime	Send timestamp UTC. On jobs with multiple recipients date/time of the last transmission or attempt. Hint: some development tools or libraries do transform local times to UTC internal, when creating the XML document.	
RemoteId	Station id of the receiving fa	ax machine (fax jobs only)

Parameters JobStatus:

StatusFile	Detailed results as CSV	Detailed results as CSV file.		
	Column	Content		
	RECIPIENT	Recipients number of mail address		
	JOBTYPE	Job type (FAX, SMS, mail, letter, QSign)		
	RESULT	Send result (OK, Busy,)		
	REMOTEID	Remote station id (fax only)		
	PAGES	Number of pages or SMS chunks.		
	SENDDATETIME	Timestamp UTC, formatted YYYY-MM-DD HH:MM:SS		
	DURATION	Duration (fax only)		
	REFID	Reference id of recipient, as given in SendJob, parameter Recipient in [] or as column Reference-Id in RecipientFile.		
		SULT","REMOTEID","PAGES","SENDDATETIME","DURATION","REFID" DK","John Doe","2","2017-06-01 15:53:06","19",""		

Results JobStatus:

0	JobId found, the job has finished and the further result values are filled
1	Unknown customer id
2	Invalid/wrong password
3	Evaluation period expired
4	Account locked
5	Job id not found
6	Job is still in progress

CancelJob

Int CancelJob (in

string **Account**,

- in string **Password**,
- in int **JobId**)

With CancelJob you may stop a placed job. The job is referenced by its id, which was returned by SendJob.

Parameters CancelJob:

Account	Your customer id
Password	Your password
JobId	Job id, returned by SendJob

Results CancelJob:

0	Job canceled successfully
1	The job was already finished and could not be canceled anymore
-1	Unknown customer id or password mismatch
-2	Unknown job id
-3	Account locked

RequestReceived

int RequestReceived (

- in string **Account**,
- in string **Password**,
- out long FaxId,
- out string CalledNumber,
- out dateTime ReceiveDate,
- out string **Originator**,
- out string **RemoteId**,
- out int **Pages**,
- out base64Binary FaxImage)

This function retrieves an inbound fax from FAX.de server. The document will be returned as Tiff file.

Important:

After retrieving and handling the retrieved fax you must delete it from our server with a call to DeleteReceived. Otherwise you would retrieve the same fax again with your next call.

Parameters RequestReceived:

Your customer id
Your password
A unique id of the retrieved fax
Number, which accepted the incoming call
Timestamp of fax reception (UTC)
Senders caller id, if signaled
Senders station id, if set in remote machine
Number of pages in document
Fax document as Tiff file

Results RequestReceived:

0	A new received fax was found and is returned in FaxImage
1	Unknown customer id
2	Invalid/wrong password
3	Evaluation period expired
4	Account locked
5	No new faxes found in inbox

DeleteReceived

int **DeleteReceived** (in

in string **Account**, in string **Password**, in long **FaxId**)

A call to this function deletes an inbound fax from our server. Reference the document by fax id, which was returned by your previous call to RequestReceived.

Parameters DeleteReceived:

Account	Your customer id
Password	Your password
FaxId	Inbound document id

Results DeleteReceived:

0	Fax was deleted from your inbox
1	Unknown customer id
2	Invalid/wrong password
3	Evaluation period expired
4	Account locked
5	Unknown fax id
