+353	Ireland	+44	United Kingdom
+972	Israel	+1	United States
+39	Italy	+379	Vatican City

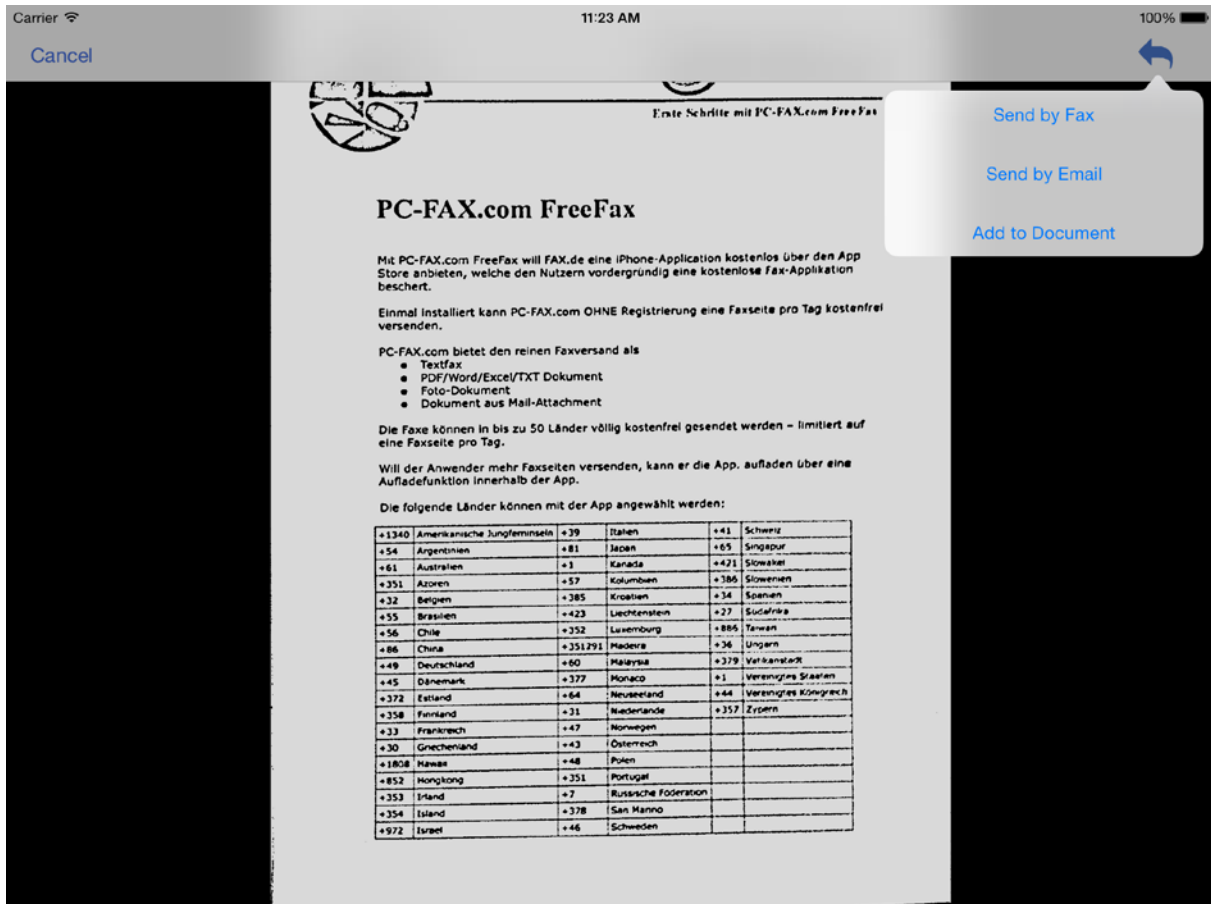

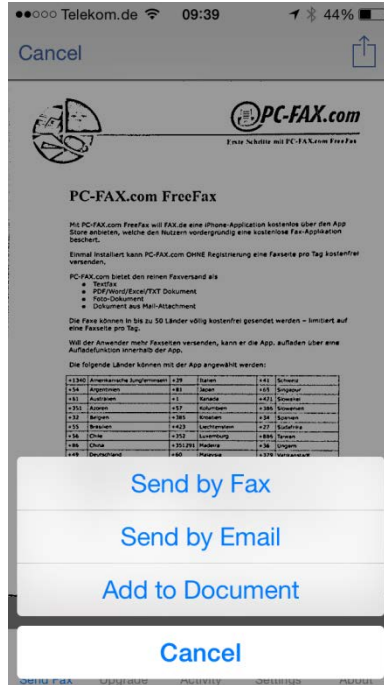

Photo-Fax, it was never easier to fax

Sending a fax on the road – wherever you are – was never easier than with the photo-fax function in the *FreeFax*.

Start the function „Send Photo-Fax“ and take a picture of the document you want to fax. You get best results with the right lighting.

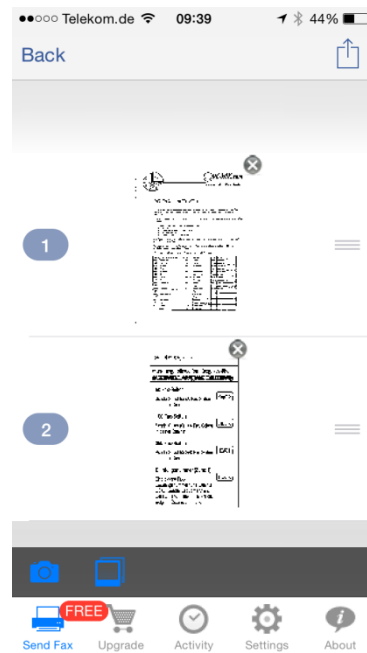

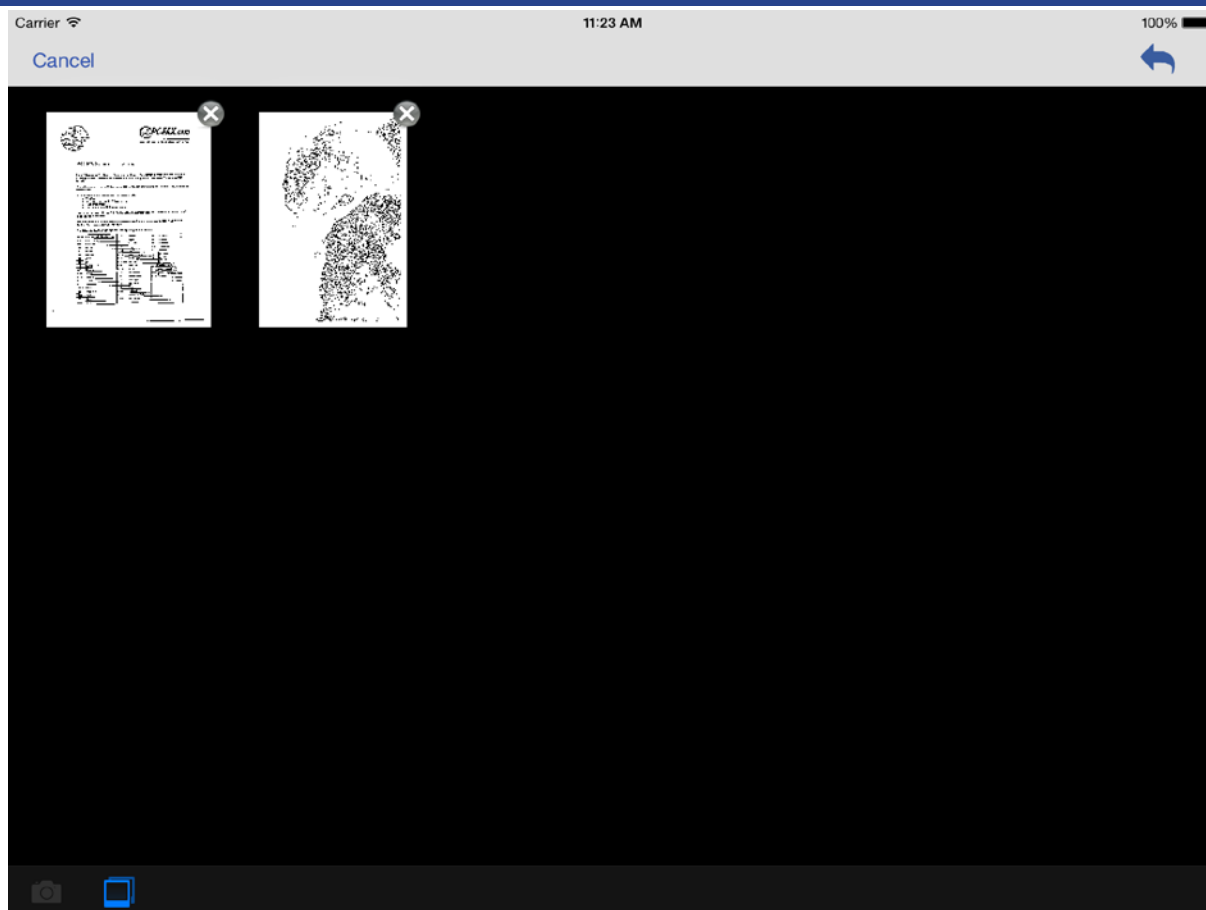

The app converts the photo into a black/white fax format and displays the fax-ready document.

You can now send the document as fax, as a pdf attachment per email or add more pages to the document.

In this example, we have clicked on the “Add to Document” button and taken another photo to create a multi-page fax document.

To send now this document, tap on the Action button and select “Send as fax”. You can also send it per email as a pdf attachment or save it in the App Documents directory for future use.

You can of course select photos from your photo album.

Just a text fax...

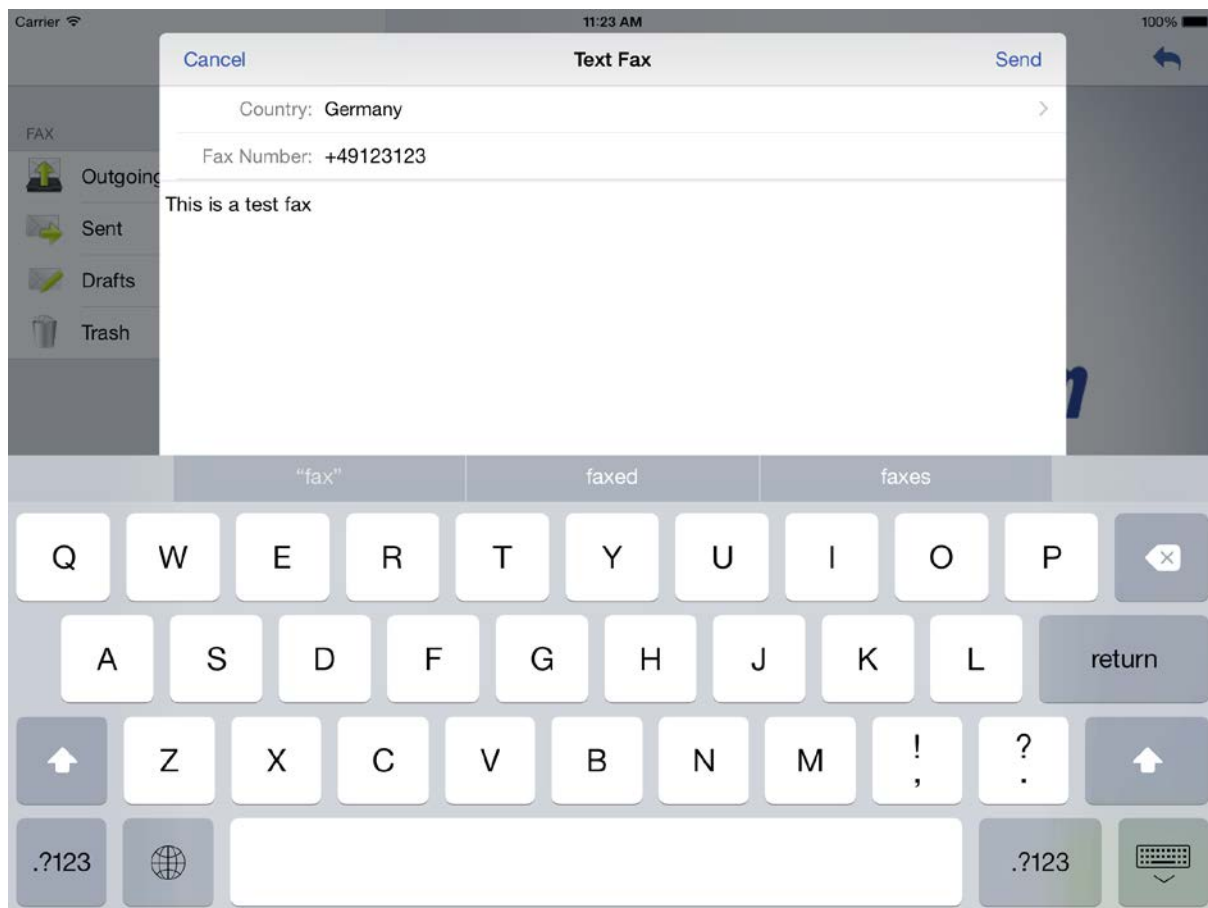

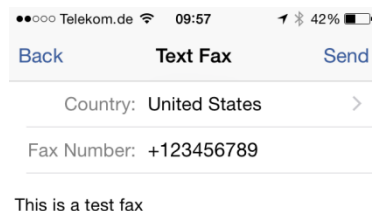

Sending a friend or a client an important message is really easy with the *FreeFax* app. Start the function “Send Text-Fax” and just type your message and enter a fax number (with the ‘+’ you can select a recipient from your contacts).

Important:

Always enter the country code when entering a fax number, deleting internal dial codes (such as ‘0’).

For example:

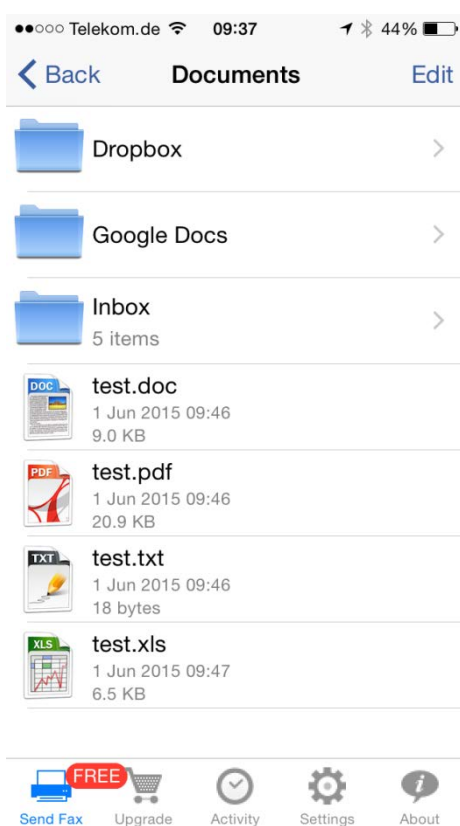

A german fax number 040-123456 have to be entered as +4940123456.

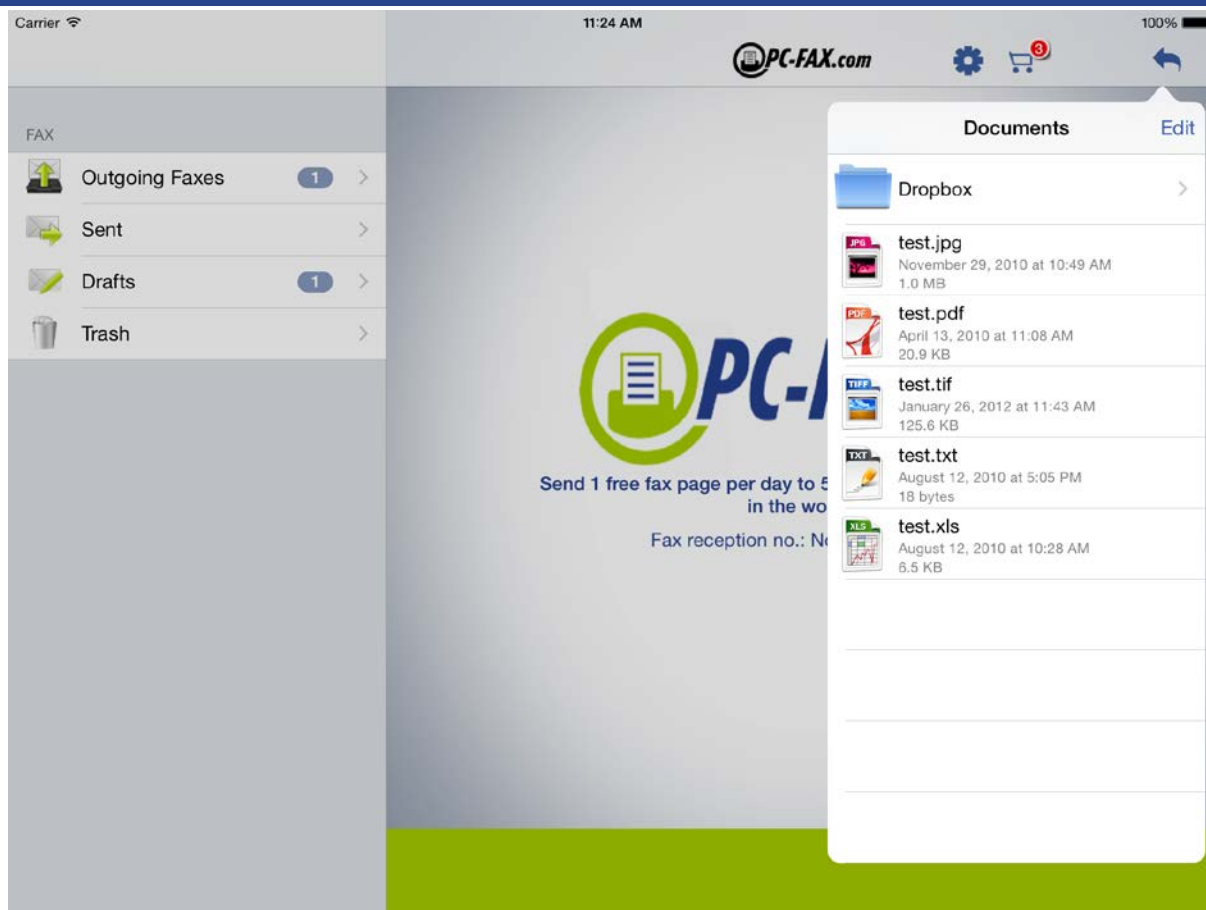

Faxing saved documents

You can upload every document of type PDF, DOC/DOCX, XLS/ XLSX, TXT directly to the App Documents directory and send them as a fax.

If you have connected a cloud server such as Dropbox or Google Drive (see Settings) it will be shown as a directory and clicking on it will change to the corresponding cloud server.

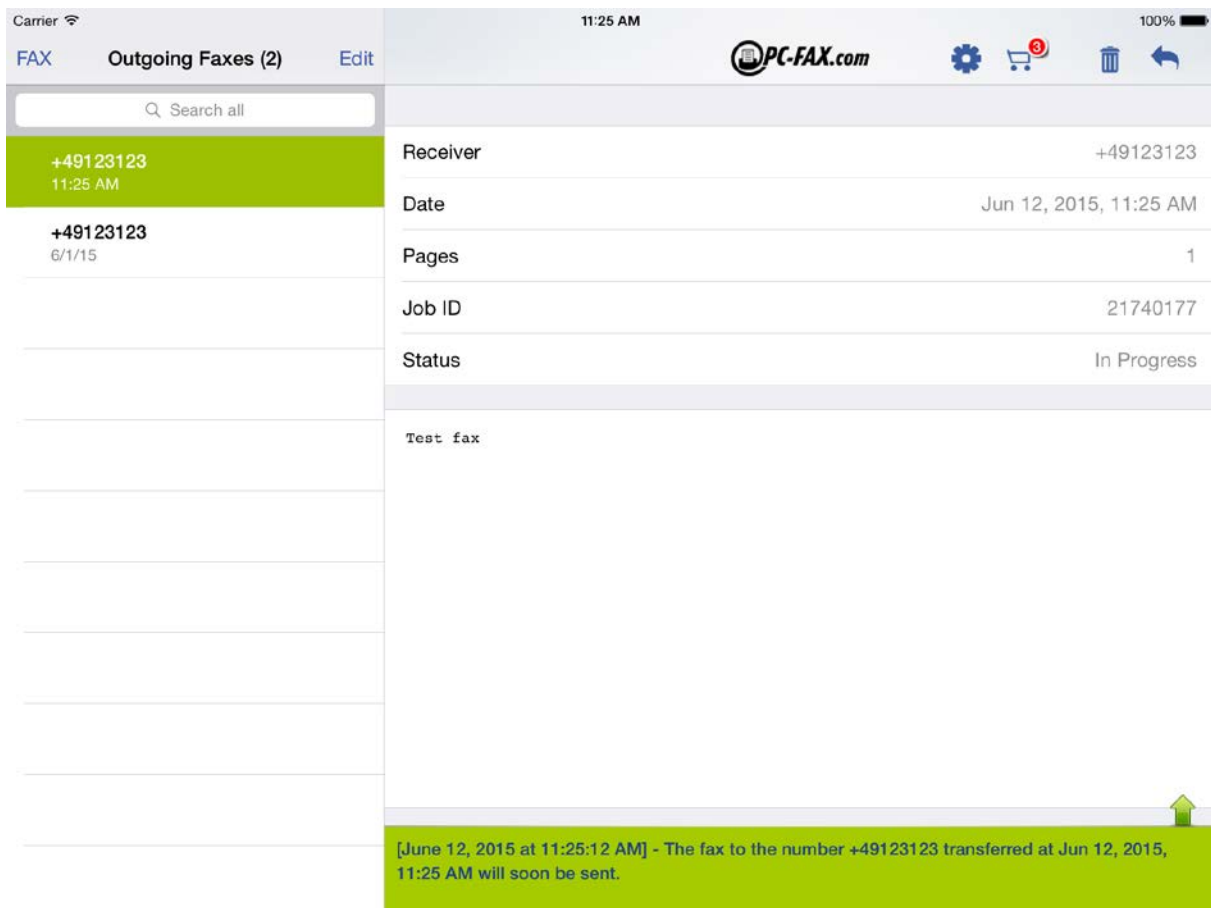

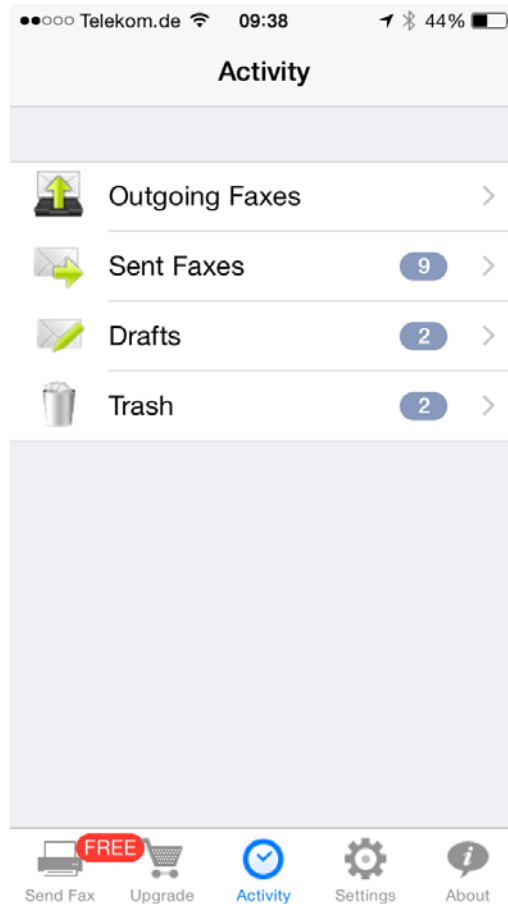

You can also send documents from your email client. Just tap and hold your email attachment and select “Open with PC-FAX.com FreeFax” app.

Activity

You can check here whether a fax has already been sent or that was a problem with sending an order.

The following statuses are possible:

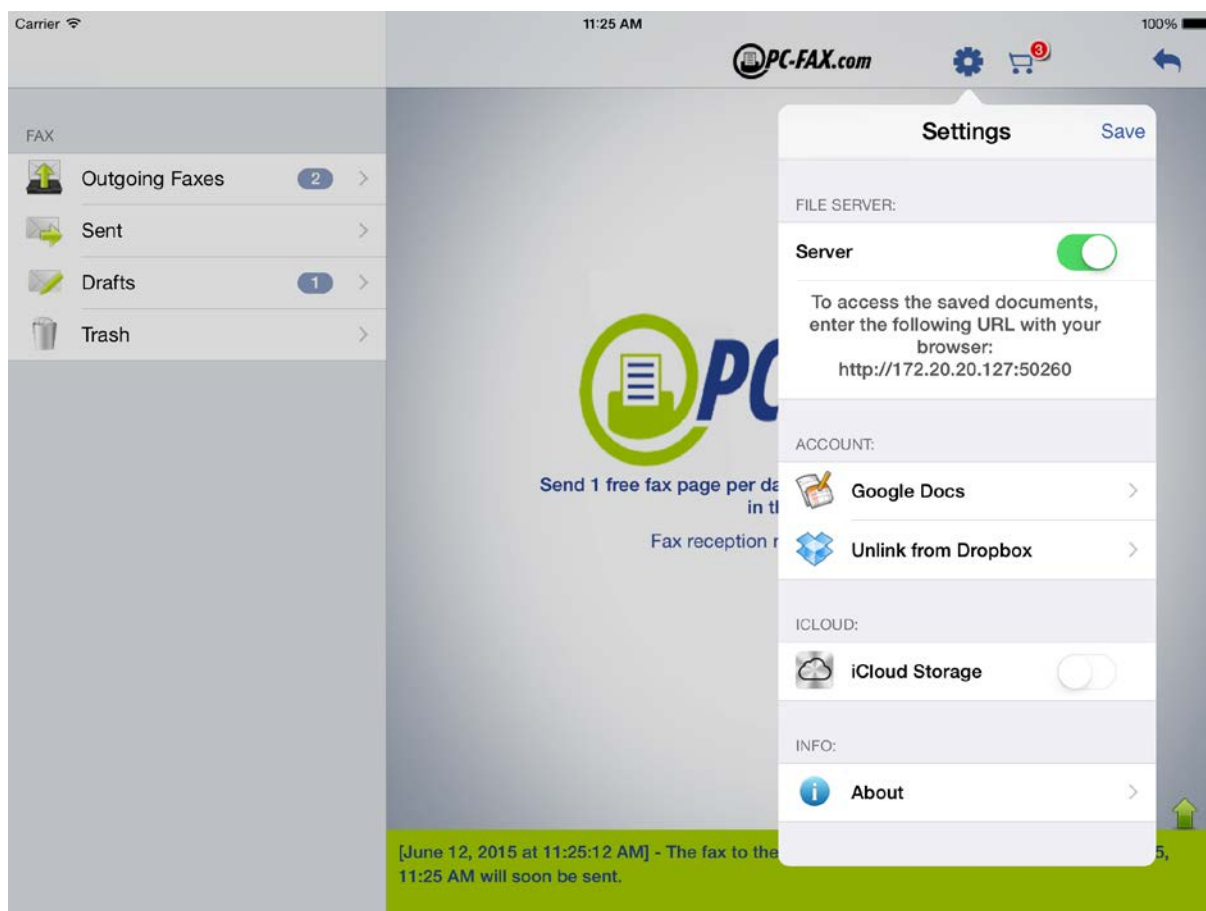

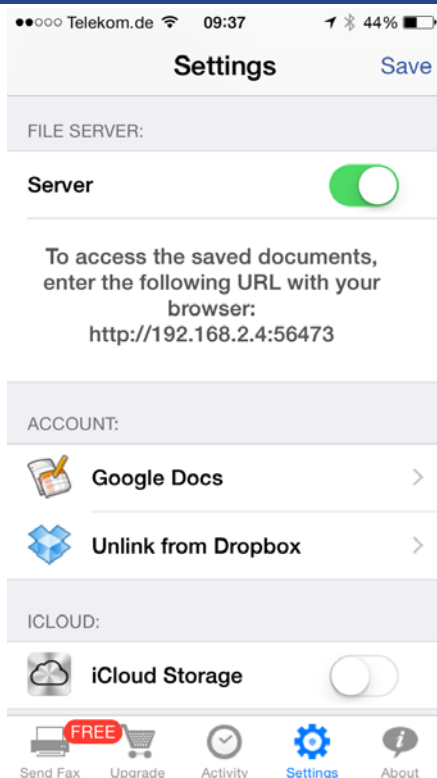

- **In Progress** - The fax was transferred to the server but has not yet been sent
- **Sent** - The fax was sent
- **Busy** - We repeatedly attempted to establish a connection after 3, 5, and 10 minutes, but the line was busy every time
- **No answer** - The other party did not answer the call
- **Voice** - Unable to establish a fax connection. Either the fax machines are incompatible or the other party is not a fax machine
- **No service** - The dial up failed at the ISDN level. No connection can be made at this number
- **Send-Fail** - An ongoing fax transmission was aborted due to an error (communication disturbance, no paper, ...)

Transferring documents to your device

You can easily upload documents into the app by using iTunes. Just connect your device to your computer, run iTunes and choose your iPhone, iPod or iPad. Then click on the tab “Apps” and select *FreeFax* app. Now you can upload all supported documents.

We offer another comfortable way to upload documents to the app. You have to go to the app settings and switch on the File server option (your device must be connected via WiFi to your local network). You should see the IP address which you have to enter in your browser on the computer. The site appears where you can upload your documents.

You can also use documents from Dropbox or Google Drive.

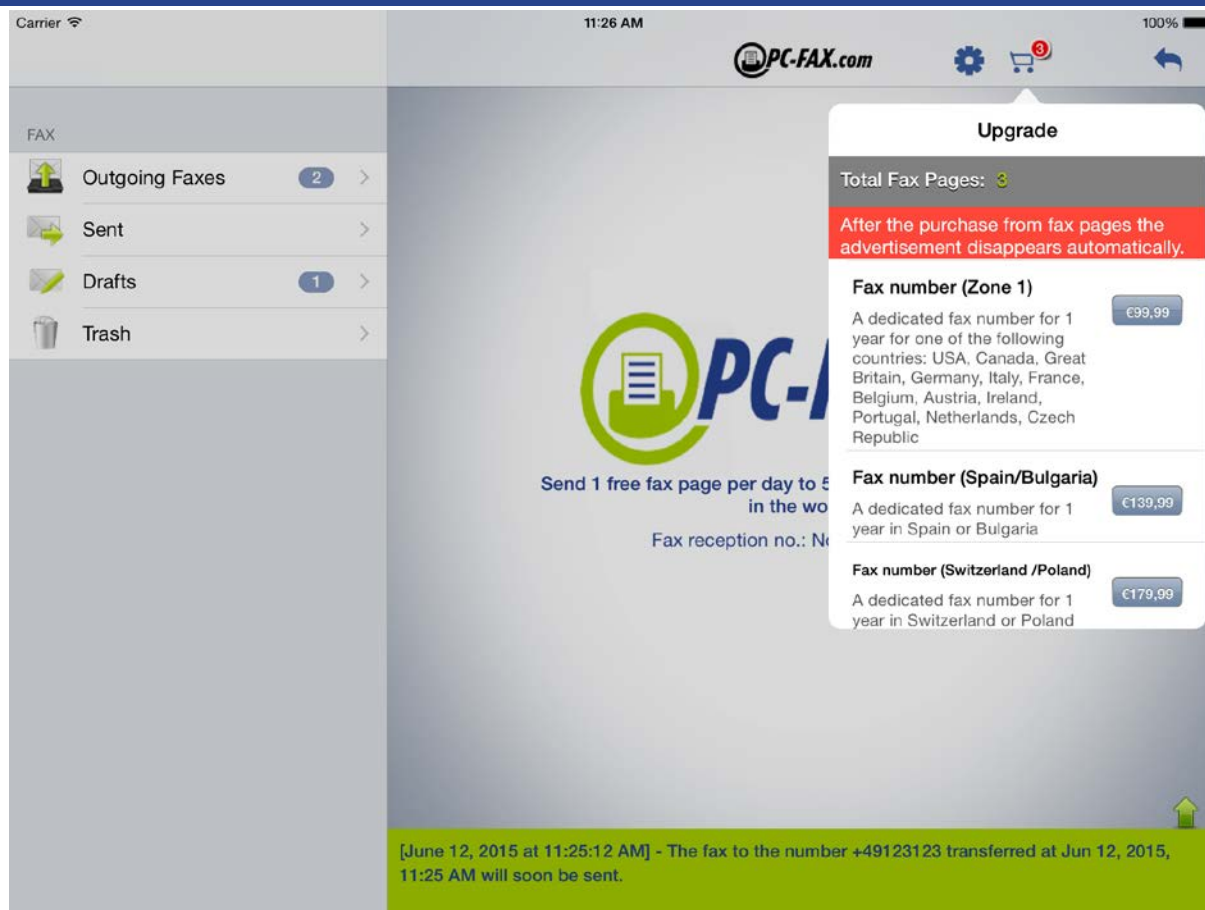

Receiving faxes

If you also want to receive faxes you have to first buy a fax number under “Upgrade” tab. On the list you have to find your country (if supported), your city and enter your email address. Now confirm and you should get an email where you can find your fax number and password.

The number is valid for 1 year. You can extend the number by making the same steps described above.

Settings

You can set here fax sender and fax header. Those data will be shown on the top of the fax document.

Under “Fax Pages” section you can restore your bought pages which could be lost e.g. when you changed your device. You have to then enter your email address and password which you had to save after first purchase.

Under “Fax Reception Number” section you can find your bought fax number. You can here also change your email address to which all incoming faxes will be sent and restore your number (e.g. on the new device).
